## CCS-2 - Computer Control Switch

Clarity, reproduction and playback are vitally important to the quality of a production. As the emphasis is placed more and more on computer-based sound playback systems, the reliability of equipment and the seamless integration of audio is paramount to a successful production.

The Nemesis CCS-2 aims to minimise such hiccups and to make sure that any unwanted interruption goes as unnoticed as possible. The Nemesis CCS-2, with its multitude of in/out options, allows two computer systems – most commonly a “MAIN” and a “BACKUP” - to share a keyboard, mouse, monitor, and distribution of GPI data and MIDI messages. The Nemesis CCS-2 can be easily remote controlled via MIDI and via closed contact from a control surface, allowing the user to have full triggering control from any console. The Nemesis CCS-2 is flexible and user friendly, capable of handling all eventualities with its completely programmable functions.

### Key features:

- > Dual input/output DVI/VGA/USB KVM switch
- > Integrated USB MIDI interface
- > 4 x MIDI outputs (2 x configurable as IN or OUT)
- > External Remote switching
- > All GPI inputs can be sent to both computers for full tracking
- > PC and MAC compatible
- > Standard class-compliant USB MIDI device

The **Nemesis** range of show control hardware was created to address a specific gap in the market for powerful, reliable and flexible show control and audio playback solutions. Designed specifically for the challenging theatre and live entertainment environments, and manufactured to the highest British engineering standards, the **Nemesis** design objective is to provide a fully specified and highly resilient set of control and redundancy hardware, enabling engineers to achieve seamlessly integrated performances.

With **Nemesis** behind the scenes, the show will go on – without unwanted interruptions and with ultimate control.
